

ADSI Deliver-IT Software Solution

Deliver-IT is a mobile delivery, productivity-enhancing solution which adds tracking and verification (POD) to the parcel delivery process. Deliver-IT operates on a light-weight, mobile computing device enabling on-the-go, door-to-door operations. With Deliver-IT, you can improve customer service, reduce errors and gain a competitive advantage.

How It Works

At the point of delivery, driver scans item and Deliver-IT confirms address, consignee, and item information. Recipient signature is

Get it right the first time

goods • quantity • place • time • price

captured for delivery confirmation. If recipient is not available, driver can capture a high-quality, digital image of drop-off location to confirm positive identification.

Delivery information can then be transmitted to the order management system in real time, allowing customer service representatives immediate access from a web browser.

Proof of Delivery

- **Signature Capture:** Capture the signature of the recipient upon delivery. The image is instantly uploaded back through the system for real-time tracking and verification.
- **GPS:** Use GPS capabilities to automatically record the delivery location. The mobile device provides a unique ability to capture the coordinates of the current location; increasing accuracy and employee productivity.
- **Signature/Shipper Release:** Confirm delivery by capturing a high-quality image of the package, along with customer name, tracking number, and any delivery exceptions.

Our Turn-Key Solutions Lead Businesses to Greater Profitability.

Delivery Solution for your Business

Increase order accuracy and labor savings with Deliver-IT

Wireless Network

Deliver-IT runs on hand-held devices that support Windows Mobile, leveraging Microsoft .net technology on a Windows and SQL Server platform. Deliver-IT uses WIFI and cellular networks to communicate to the central server. When a connection is not available, data is captured and stored on the mobile computer. Once a connection is available, all information is immediately transferred. The Deliver-IT server manages all transactions and communications with the order management system.

Improve accuracy of deliveries and quality of information available. Avoid costly refunds, missed deliveries, and reduce the time to resolve customer order issues with Deliver-IT.

PACKAGE DETAIL	
Shipped By: ADSI	Shipped On Behalf Of:
Shipped By: Engineer, ADSI	
Ship Date: 11/30/2010	
Ship To Information

Company: ABC Company	State: IL
Address1: 2401 W Hassell Rd Suite 225	Postal Code: 60196-0001
Address2:	Country:
Package Information	
Packaging: CUSTOM	Service: ADSI Next Day
Weight: 150.00	
Dimensions: 20X20X20	Total: \$16.00
Tracking Number: 962817263542561601	
You may track this package on the carrier's website by clicking on the tracking number.	
Signature capture for this shipment:	
	
<input type="button" value="Reprint Shipping Label"/>	<input type="button" value="Void Package"/>
<input type="button" value="Repeat Package"/>	

Reduce Losses

With increased visibility and accountability, Deliver-IT simplifies the delivery process by providing electronic tracking of shipments. This, in turn, leads to a lower rate of lost or unaccounted for items and can assist in reducing expenses overall.

Improve Productivity

With GPS verification and an easy-to-use interface, you can maximize worker productivity and reduce costs associated with manual delivery processes. Empower managers and controllers with productivity management tools that keep them connected.

Enhance Customer Service

Delivery information can be provided to your customers instantly. Maintain customer service excellence with the automation of real-time e-mail notification and reporting.
